Climatex Lifeguard

After the development of Climatex Lifecycle, the next challenge was to develop an environmentally optimized material that met the strictest flame retardancy standards around the world. The result of that work is Climatex[®] LifeguardFR[™], made from wool and the redesigned cellulose fibre LenzingFR[™]. This fiber is harvested from renewable beech wood.

The ecologically optimized production processes utilized in Climatex[®] Lifecycle[™] remain unchanged for this new development. The positive list of environmentally sound chemicals and 16 dye chemicals from Ciba developed with EPEA remain intact this new development. The choices for colors and designs are unlimited, except for pure black.
