Creation Baumann

This 115 year old textile company is one of the most renowned in Europe. With one eye on design innovation, the other has always been on ecology. As a fully vertical textile mill controlling their own products from yarn twisting, through dyeing, weaving and finishing Creation Baumann is able to implement and control environmental standards throughout the production process.

The Baumann line is steeped heavily in the production of synthetic fabrics, especially those to meet stringent flame retardancy codes for commercial buildings. Their motto has been “Ecology through Technology”, investing significantly in making sure their water and air quality meets the highest standards.

One of the best known standards is the OEKO-TEX STANDARD 100. An independent textile research institute test fabrics for harmful substances in accordance with very strict guidelines. The label is only awarded to products that have PH values that are kind to the skin. It tests for formaldehyde, pesticide, pentachlorophenol, heavy metals, chlororganic carriers, and cancer or suspected cancer-inducing substances, allergy inducing dyes and colour fastness.

Creation Baumann has also achieved ISO 14001 certification, the world renowned and recognized leading environmental certification in existence today.
